

All About **NUTRIGREEN**²⁰⁻⁵⁻¹⁰

Precision

Not too early, not too late, not too much, that's what fertilizing turf is about. The key is precision. Experience and independent research by The Sports Turf Research Institute in Bingley, England, has shown the following:

Nitrogen Availability When Your Turf Needs It

The nitrogen in NutriGreen does not become available until the turf needs it. Turfs need for nitrogen and the availability of nitrogen in NutriGreen are, in our climate, the same. Excess growth and stagnant growth of your turf are things of the past. Practice has proven that sudden changes of the weather will not affect the performance of NutriGreen.

Endurance

Immediate growth reaction upon application is normal. NutriGreen is designed to sustain your turf between growth periods. Through its phased nitrogen availability, NutriGreen fosters longer lasting growth, when compared with traditional slow release fertilizers. This leads to extremely longer endurance and enhanced performance.

Get Continuously Improving Results with NutriGreen

Through repeated use of NutriGreen fertilizer, a nitrogen buffer will be build up in the soil. Your turf will be able to resist negative impacts from the environment since there is always nitrogen available.

Unique Features

Well balanced nutrients and the use of the best ingredients make NutriGreen fertilizer unique. For example; the iron added in the blend is designed to prevent stains on concrete. Or the calcium, which is sourced from Dolomite, balances out any acidic effects of the fertilizer itself.

Fertilizer That Makes Cents

Using NutriGreen fertilizer help you cut cost by saving time and money for preventing extra applications of lime to counter the negative impacts of fertilizer. It also avoids extra maintenance costs caused by growth spurts from time released fertilizers as well as cleaning costs after incidental spillage on concrete.

All About Quality Sod provides premium quality sod and sod products with a high standard of service to achieve maximum customer satisfaction. Call us for the whole sod story!
